

# INTRODUCTION

---

A decentralized tokenized gamified network that connects sustainable hubs with community. Giving community access to hubs and their amenities through their membership. Providing the tools spaces for digital nomads and creatives to find their ultimate environment. Community driven activations that reward the activator and the activated.

In other words...

KOMMUNITY is a decentralized and tokenized network that combines gamification, sustainability, and community building. The network connects sustainable hubs with the community, providing members with access to Hub amenities through their membership. KOMMUNITY also provides tools and spaces for digital nomads and creatives to find their ideal environment. The network is driven by community-driven activations that reward both the activator and the activated. With its innovative tokenomics, circular economy, and focus on tribe building, KOMMUNITY aims to create a more sustainable, connected, and rewarding world for all.

# GETTING STARTED

---

As a member you can choose to access any hubs located around the world freely for any period of time. You gain rewards by contributing to the network through 'time banking'. You also gain rewards through participation and connections in a gamified way. You can create an activation or service which is approved by the network and then receive rewards for your contribution. The members who attend your activation or utilizes your services also receive a fractional reward. You can now enjoy the freedom of these amenities through a circular digital economy. A life of abundance and community driven intentions. Get access to wellness spaces, event spaces, creative spaces, co-working spaces and much more through our designated sustainable global hubs. Hubs can choose to join the network and also receive network benefits & rewards.

# IMPACT

KOMMUNITY is committed to making a positive impact on the world, and this is reflected in every aspect of our platform. Our hubs are designed to be sustainable and environmentally-friendly, using cutting-edge technologies and practices to reduce our carbon footprint and promote sustainable living. By showcasing these models to the world, we hope to inspire others to adopt similar practices and contribute to a healthier planet. Expressing each hub as a showroom of the technologies and tools utilized for our sustainability model. We also reward our members for creating activations that benefit the environment and local impact. All members are an intricate part of the system and therefore can act as a representative of the network. This gives them access to resources and communities to share or solve problems in the local community in which the hub exists. Moreover, KOMMUNITY is about building a strong sense of community, both within our hubs and beyond. This creates a positive feedback loop where members are motivated to make a difference, which in turn helps to build a stronger and more sustainable network. This creates a powerful impact, where members can collaborate and work together to create meaningful change. In short, KOMMUNITY is all about creating positive impact at every level, from the individual member to the global community.

## DECENTRALIZED AUTONOMOUS ORGANIZATION

A Decentralized Autonomous Organization or DAO is an entity structure in which tokenholders participate in the management and decision-making of an entity. Member-owned communities; there is no central authority of a DAO; instead, power is distributed across token holders who collectively cast votes. If and when big network changes are to be made all members will receive a notification to participate in a voting appeal that is on the blockchain. The network has built-in treasuries that no one has the authority to access without the approval of the group. Decisions are governed by proposals and voting to ensure everyone in the organization has a voice, and everything happens transparently on-chain.

TRANSPARENCY.

The backbone of a DAO is its smart contract, which defines the rules of the organization and holds the group's treasury. Once the contract is live on Ethereum, no one can change the rules except by a vote. If anyone tries to do something that's not covered by the rules and logic in the code, it will fail. Also because the treasury is defined by the smart contract as well that means no one can spend the money without the group's approval either. This means that DAOs don't need a central authority. Instead, the group makes decisions collectively, and payments are automatically authorized when votes pass.

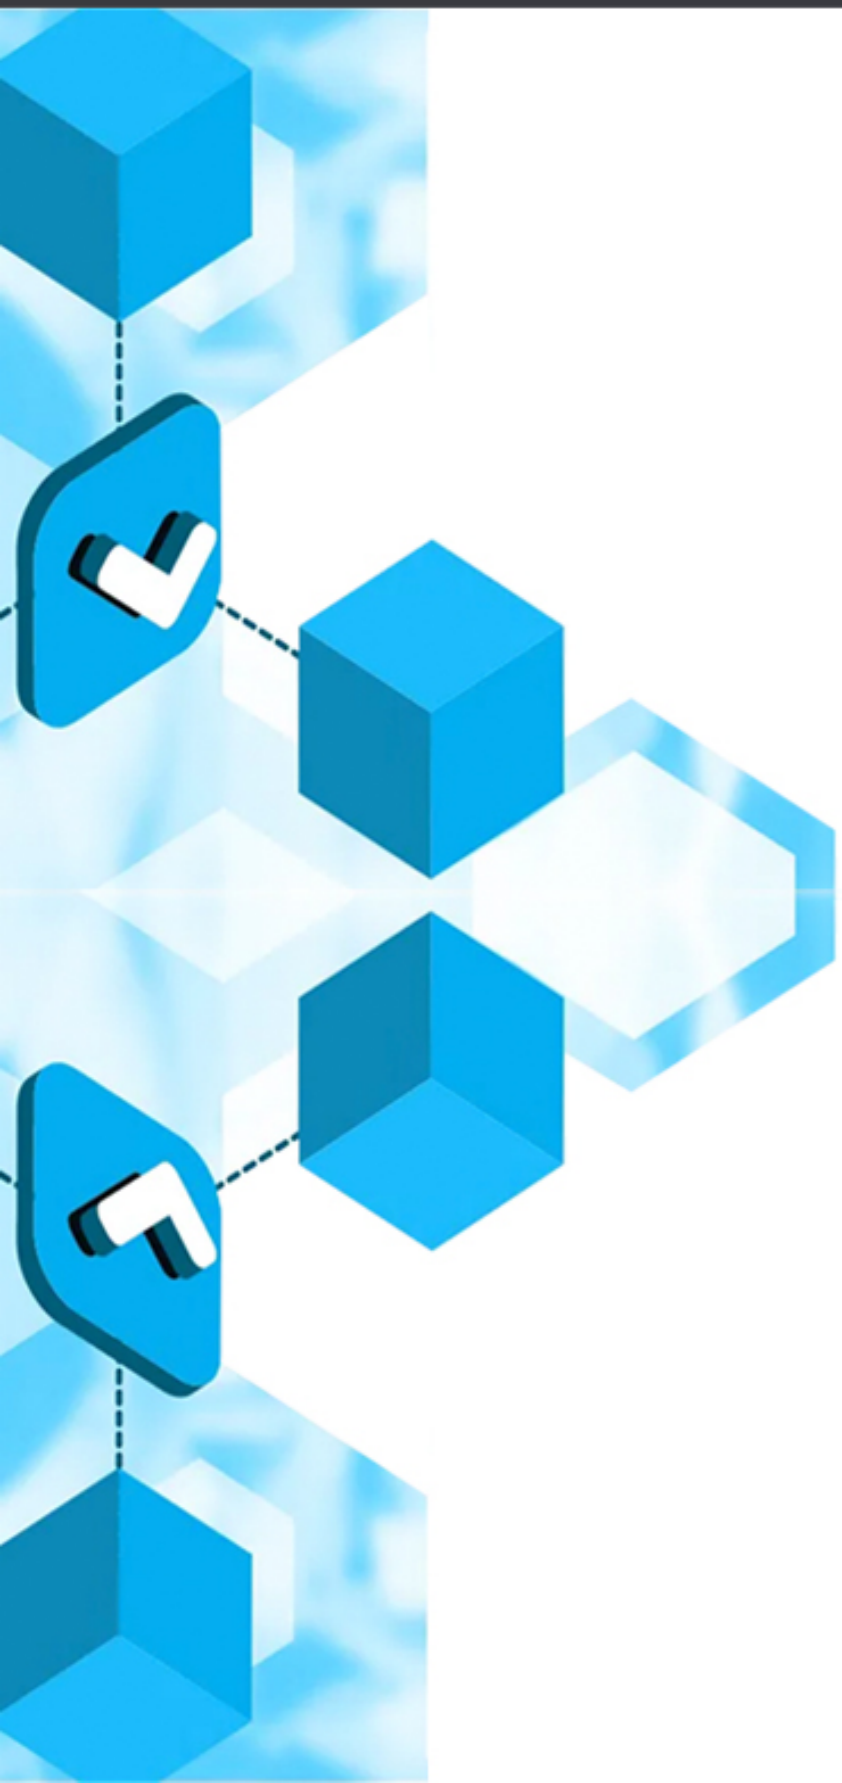

# WHY DECENTRALIZATION

In blockchain, decentralization refers to the transfer of control and decision-making from a centralized entity (individual, organization, or group thereof) to a distributed network. Our network is community based. Until now, centralization has been a prerequisite for all of our financial & corporate structures. Political, educational, financial and business systems are, and have always been, crafted in a way that does not equally and ethically distribute power to those functioning within them. There have been times in our history where this sort of internal structure played an important role, but in an age with the information of the world available at the click of a button, it's time to rethink.

Cryptocurrency itself comes from the idea of redefining wealth and how it can be acquired, which goes against traditional processes by its very nature. And yet, most, if not all, cryptocurrencies function within enforceable rules. When the rules of the game are changed against their favor, they have no option but to comply; regardless of the consequences.

"We believe through the power of collective decentralization we can build something stronger than a centralized team ever could create. A community-run token is nothing without the united individuals who give it Purpose."

## -NETWORK CHANGES

Any changes to the network's governance structure must be approved by a majority of members.

## -SUSTAINABLE STANDARD

All members must adhere to the sustainability guidelines set forth by the network and individual hubs.

## -HUB CARBON FOOTPRINT

Hubs must regularly report on their sustainability practices and progress towards meeting their goals.

## -DIGITAL ECONOMY

Time banking is created automatically via blockchain approval and through verified RFID. HUB & KOM tokens are secured through the ethereum smart chain.

## -ACTIVATIONS

Any activations or services must be approved by at least 1 member to qualify and approve its presence on the network.

# TOKENOMICS

KOMMUNITY's tokenomics consists of two main tokens: the Main Network Token (KOM) and Hub/Hive Token (HUB).

KOM is the stablecoin used as the primary currency within the KOMMUNITY ecosystem, and it has unlimited supply. Its value is pegged to a major fiat currency, which ensures that its value remains stable. It plays a major role in the gamification and time banking / reward economy of the platform.

HUB are limited in supply and serve as investments in the sustainable hubs within the KOMMUNITY ecosystem. These tokens can be used to invest in various projects within the hubs, such as renewable energy initiatives, sustainable agriculture, and local businesses. As more projects within the hubs become profitable, and the supply of HUB becomes more limited, the value increases.

The HUB tokens are also used for governance within the KOMMUNITY ecosystem. HUB holders can vote on important decisions related to the development and direction of the project, such as the allocation of funds for new projects or changes to the governance structure.

The overall goal of the tokenomics is to create a sustainable and equitable ecosystem that benefits both the community and the environment. By using KOM as a stable currency and HUB as a limited investment opportunity, KOMMUNITY aims to create a thriving economy within the sustainable hubs while also ensuring the long-term success of the project.

Token sale: The initial token sale will take place on a decentralized exchange (DEX) and will be open to the public. The price of HUB tokens will be determined by market demand.

Token utility: KOM tokens can be used for a variety of purposes within the KOMMUNITY ecosystem, including:

- Receiving access to community hubs & its services and products.
- Rewarding community members for contributing to the ecosystem.
- Taking part of our reward gamified systems.
- Creating your own experiences within the ecosystem.
- Donating to impact.

Token utility: HUB tokens can be used for a variety of purposes within the KOMMUNITY ecosystem, including:

- Staking to participate in community governance.
- Participating in the sustainable hub development fund.
- Joining a tribe to create a sustainable Hub.
- Participating in local & international impact projects.

Token economics: The HUB token economy will be designed to incentivize long-term holding and usage of the token. This will be achieved through mechanisms such as:

- Token burning: A portion of the transaction fees will be used to buy back and burn HUB tokens, reducing the total supply and increasing the value of remaining tokens.
- Staking rewards: Users who stake their HUB tokens for governance purposes will receive rewards in the form of additional HUB tokens.
- Community incentives: KOM / HUB tokens will be used to incentivize community members to contribute to the ecosystem, such as through content creation, referrals, or other activities.

# TOKENOMICS

Token name: KOMMUNITY (KOM).

Token type: KOM is a utility token that can be used within the KOMMUNITY ecosystem to access various services and products.

Total supply: The total supply of KOM stable-coin is unlimited.

Token distribution: KOM tokens can only be acquired by members of the network through a physical automated gamified mining reward / time banking system.

Token name: HUB/HIVE (HUB).

Token type: HUB is a ownership / governance token that can be used within the KOMMUNITY ecosystem that is used to vote on various network changes and hubs ecosystems.

Total supply: The total supply of HUB is a limited supply of 1,000,000,000,000 tokens.

Token distribution: The distribution of HUB tokens will be as follows:

25% of the tokens will be reserved for community incentives and partnerships.

25% of the tokens will be set aside for the sustainable hub development fund.

25% of the tokens will be sold in the initial token sale.

25% of the tokens will be allocated to the KOMMUNITY treasury.

## PROFILE & WALLET

---

The digital profile in KOMMUNITY is a comprehensive representation of a member's identity within the network. It includes personal information such as name, location, skills, and interests, as well as data related to their activity and engagement on the platform, such as attendance, connections, and contributions.

The digital profile also includes a token wallet, which allows members to manage their KOMMUNITY tokens and other cryptocurrencies. The token wallet is secure and transparent, and all transactions are recorded on the blockchain for easy tracking and accountability. It would display their token balance and transaction history, and provide options for sending, receiving, and exchanging tokens. Additionally, the digital profile and token wallet would be linked to the time banking & reward system, allowing members to track their participation and attendance, as well as their rewards and bonuses. The more active and engaged a member is within the network, the more rewards they would earn.

In addition to personal and financial data, the digital profile also features a community network that displays a member's connections and collaborations within the network. This allows members to easily discover and connect with others who share similar interests and goals, and to form communities around shared passions and projects.

Overall, the digital profile and token wallet serve as a powerful tool for members to participate in the KOMMUNITY ecosystem and to engage with others in meaningful and rewarding ways. It will also give you access to the KOMMUNITY calendar for each hub to permit you to access and book specific experiences.

## YOUR KEY

---

In KOMMUNITY, Your Key is a multifunctional RFID jewelry that serves several purposes. Firstly, it acts as a POS system, allowing members to purchase goods and services within the community network. Your Key is also linked to your digital wallet within the KOMMUNITY platform. This integration allows for easy management of your KOM / HUB tokens. It also enhances security by ensuring that only the rightful owner of the key can access the associated digital wallet. This creates a seamless experience for members to engage with the network and use their tokens for various activities, including making purchases within the sustainable hubs. Secondly, it serves as an attendance verification tool, ensuring that members receive their rewards for attendance. Thirdly, it can unlock doors and grant access to different areas within the sustainable Hubs or Hives. This allows members to move around freely and explore the different offerings and experiences within the community. Additionally, Your Key also serves as a symbol of belonging and membership within the KOMMUNITY network.

## GAMIFICATION

---

The idea is to combine entertainment, connection, participation, activations and rewards in a gamified way. In KOMMUNITY; gamification is utilized to inspire members to engage with the network and perform tasks that may not otherwise be enjoyable. Daily notifications are sent to members in the form of games or tasks that can be completed to benefit the network or a specific hub. These tasks can range from connecting with other members to participating in sustainable practices to creating an experience or joining one. By participating in these tasks, members earn rewards in the form of KOM tokens or other incentives. This approach not only encourages active participation but also helps to build a sense of community among members. The use of gamification has proven to be a successful method for increasing user engagement and promoting growth within the platform. As the GameFi market continues to grow, KOMMUNITY aims to remain at the forefront by continuously integrating new and innovative gamification strategies.

Even though GameFi is still an infant industry, its market worth has recently exceeded \$14B and is estimated to grow to \$50B by 2025. Many founders choose it simply due to unprecedented potential, easy user engagement, and pretty fast community growth.

## TIME BANKING

Time banking is a system of bartering various services for one another using labor-time as a unit of account. Labor-time units can be credited to a person's account in the time bank and redeemed for services from other members of the time bank. Time banking can be considered a form of community currency (KOM). By simply giving a bit of your time or skill or service you will receive KOM rewards equitable to your time. Time banking is a system that allows individuals to exchange their time and skills with others in their community, without the need for money. In KOMMUNITY, we have implemented a time banking system to encourage members to share their knowledge, skills and resources in a way that promotes sustainability and community building. When a member contributes their time and skills to a project or initiative within KOMMUNITY, they earn KOM that can be used to access the time and skills of other members. For example, if a member volunteers their time to help build a sustainable hub in KOMMUNITY, they would earn time credits as KOM tokens that could be used to receive help with their own project or initiative from another member with a relevant skill set. Time banking in KOMMUNITY is also integrated with our gamification system. Members earn points and rewards for their contributions to the community through time banking, which helps to incentivize participation and engagement. Furthermore, all time banking transactions are recorded on the blockchain, ensuring transparency and accuracy in the exchange of time and skills. This also helps to create a trusted and secure environment for members to participate in time banking without the need for intermediaries. Overall, time banking in KOMMUNITY is a way to encourage sustainable and community-oriented practices while also promoting the sharing of knowledge and resources among members.

## ATTENDANCE

Attendance is key, we want all our attendees to feel rewarded for their participation. So that is why we chose to enable our time banking crypto tech to reward those who attend. It being gamified the more attendance creates more momentum which creates larger reward pools. In Kommunity, the reward system for attendance is designed to incentivize and reward members who actively participate in community events and activities. This is achieved through a gamified time banking system that enables members to earn rewards in the form of Hub Tokens for attending events.

Each event or activity is assigned a certain number of KOM Tokens that are allocated to be distributed among the attendees based on their level of participation. The more a member attends events and actively participates, the more rewards they earn, and the larger the reward pool becomes. As the reward pool grows, it creates a positive feedback loop, encouraging more members to participate in events and activities, which in turn creates a more vibrant and active community. Additionally, the use of blockchain technology ensures that the rewards are transparent and securely distributed, creating a fair and trustworthy system for all members.

## DATA SHARING

At KOMMUNITY, we understand the value of data and the importance of ensuring that our members have complete control over their own data. We believe that our members should be able to choose who they share their data with and how it's used. By empowering our members to have complete ownership of their data, we're creating a platform that promotes trust and transparency. Members can rest assured that their data is being used in a responsible and ethical manner. Additionally, our reward system incentivizes members to share their data, as they'll receive compensation for doing so. This creates a win-win situation for everyone involved: members are rewarded for sharing their data, and other members benefit from the shared data.

Members can collect various types of data depending on their interests and needs. For example, some members may collect and share personal data such as demographic information, interests, and behaviors to understand and analyze their own online presence. Others may collect and share market research data, such as consumer trends and market analysis, to inform the KOMMUNITY.

In addition to these types of data, members can also collect and share data related to specific industries or areas of interest.

By allowing members to collect and share different types of data, KOMMUNITY creates a dynamic and diverse data ecosystem that benefits all members of the platform. With a robust and varied data set, members can gain insights and make better decisions in their personal and professional lives.

To put it simply hives are hubs. They are the key to all access. Owners of hives or HUB token holders receive significant rewards which benefit the development and economy of their hive. Hives/Hubs are the jewel of the network and come in all shapes and forms, each expressing their own identity. Hive owners & HUB token holders play a critical role in the KOMMUNITY network. As the hubs of activity and sustainability, hives are central to the growth and success of the network. To incentivize ownership and reward Hive owners & HUB token holders for their contributions, KOMMUNITY offers a range of benefits and rewards. Hive owners or HUB token holders receive significant rewards for their contribution to the network, which directly benefits the development and economy of their Hive. This includes access to a range of resources and technologies that enable them to act sustainably, as well as support from the wider KOMMUNITY. These rewards include access to exclusive events, networking opportunities, and collaborations with other hives. Additionally, hive owners or HUB token holders can participate in decision-making processes and governance, allowing them to have a direct impact on the direction and future of the network. Furthermore the uniqueness of each Hives/Hubs creates a diverse and dynamic ecosystem that encourages creativity, innovation, and collaboration. Overall, the reward system for Hives serves to incentivize sustainable and responsible development within the KOMMUNITY network.

## TRIBE BUILDING

---

Build your network and gather your tribe. Tribe building is all about creating connections and fostering relationships within the KOMMUNITY network. By gathering people with similar interests and values, you can create a community that supports and uplifts each other.

In KOMMUNITY, tribe building is facilitated through various features such as the ability to create and join groups, attend events, participate in discussions and is part of our gamefi reward system. Members can easily find others who share their passions and interests, and connect with them to build their tribe.

Through tribe building, members can also discover new opportunities for collaboration and business ventures. By connecting with like-minded individuals, members can work together to create impactful projects and activations, and even start their own hives. As members of the network come together and form their own tribes, unity is fostered and a sense of belonging is created. This not only benefits individual members but also strengthens the overall community and its ability to create positive change.

Members of your tribe play a key role in your day to day life. Tribes can create hives, which can create more activations. Through unity members will begin to form ideas and ideals in which they can flourish.

How we utilize our circular economy for higher sustainability impact with the community;

-Gamification: KOMMUNITY uses gamification to incentivize members to engage in sustainable practices. Members can earn KOM rewards, badges, and other incentives for participating in sustainable activities, such as recycling, removing waste.

-Time banking: KOMMUNITY also uses time banking to promote sustainability. Members can earn HUB tokens by volunteering their time to support sustainable projects in their local community. For example, members might earn KOM tokens by participating in community clean-up events or by helping to maintain a community garden.

-Sustainability: Sustainability is at the core of KOMMUNITY's circular economy. Members are encouraged to adopt sustainable practices, such as reducing waste and conserving energy, both in their personal lives and within the community. By promoting sustainable living, KOMMUNITY aims to create a more resilient and self-sufficient community.

- Blockchain technology: KOMMUNITY leverages blockchain technology to create a transparent and secure platform for members to exchange goods, services, and KOM tokens. Blockchain technology also enables KOMMUNITY to track the sustainability impact of members' activities, ensuring that members are rewarded for their positive contributions to the community.

- Tokenomics: KOMMUNITY's tokenomics is designed to promote the circular economy by incentivizing sustainable behavior. The main network KOM token serves as a stable coin with unlimited supply, enabling members to exchange goods and services without worrying about volatility. HUB tokens, on the other hand, are limited in supply and serve as investments in sustainable projects within the community. By using HUB tokens to fund sustainable projects, KOMMUNITY creates a circular economy in which members are rewarded for supporting the community's sustainability goals.

## HUBS / HIVES

---

KOMMUNITY hubs/hives are an integral part of our platform that provides our members with a unique and sustainable living experience. These spaces are designed to be more than just places to live, but rather vibrant and diverse communities that offer access to event spaces, wellness spaces, co-working spaces, and creative spaces such as art and music studios. KOMMUNITY hubs are located in secluded natural locations, which provide a resort-like atmosphere for those who want to get away from the hustle and bustle of the city. Our hubs/hives promote sustainability and eco-friendliness, with features such as renewable energy sources, community gardens, and green spaces. We are proud to offer our members a truly exceptional living experience that fosters community, creativity, and sustainability.

## YOUR DATA

---

Data ownership refers to both the possession of and responsibility for information. Our mission is to empower members and users to have control over their personal data and ensure that it is collected in a sustainable and ethical manner. We believe that data ownership should be recognized as a fundamental right, and we are committed to providing transparency and choice in data collection practices. By leveraging innovative technologies and ethical frameworks, we aim to create a platform where members and users can trust that their data is being used for their benefit and the benefit of society as a whole.

# OVERVIEW

---

“Every human is a part of nature, for 99% of human existence on earth we have been living an independent nomadic lifestyle. Exploring, traveling and experiencing. In 2014 man kind officially became an urban species; with 56% of its population living in cities. The earth should travel and explore the world; it's still encoded in our DNA. Today a new breed of nomads is emerging. Where location independence is the new street. In the upcoming decade we are expecting the nomadic population to surpass one billion people. Thereforth we are building high tech spaces into the world's most inspiring natural settings. Spaces for the new digital nomad population, startups, tech companies and artists. Strategic locations in smart times zones that all members will access through their membership key.”

# OVERVIEW

---

A decentralized platform is one that is controlled and distributed among a network of computers or nodes or individuals rather than being centralized in one entity. In the case of KOMMUNITY, this means that the network operates without a central authority or control, allowing for greater autonomy and security.

A tokenized system uses digital tokens, often on a blockchain, to represent value or ownership in a decentralized network. KOMMUNITY utilizes tokens to facilitate transactions and reward members for their contributions to the network.

A gamified system uses game-like elements, such as challenges, rewards, and leaderboards, to incentivize and engage users. In the case of KOMMUNITY, gamification is used to encourage members to participate in community-driven activations that benefit the environment and local impact as well as our ecosystem.

Sustainability refers to practices that promote the long-term health and well-being of the environment, society, and economy. KOMMUNITY places a strong emphasis on sustainability, both through the utilization of sustainable technologies and tools within its hubs and by rewarding members for creating activations that benefit the environment and local impact.

RFID, or radio-frequency identification, is a technology that uses radio waves to identify objects or people. In the case of KOMMUNITY, RFID technology is used to automate time banking and grant members access to hubs and their amenities through their membership.

Community building refers to the process of creating and strengthening relationships within a group or community. At KOMMUNITY, community building is a core focus, with the goal of fostering a strong and interconnected network of members who can work together to create positive impact in their local communities and beyond.

Hubs are physical locations that serve as the center of the KOMMUNITY network. These hubs are designed to be sustainable and eco-friendly spaces that provide amenities and services to the community members. The hubs serve as a showroom for the sustainable technologies and tools used by KOMMUNITY, and members can utilize them as their workspace, living space, wellness space and play space. Overall, the hubs are an essential part of the KOMMUNITY network, as they provide the physical space for members to gather, collaborate, and create positive impact.
